## Press Release

Eindhoven, July 2005

**For the first time, the Worlds most comprehensive linear AND 2-D Bar Code Verifier,**

**LVS INTEGRA® 9500,  
will be shown to the European public at the Labelexpo Europe 2005 !**

Now finally the time has passed that a different verifier is needed for each type of symbology!! During the forthcoming Labelexpo Europe 2005, Label Vision Systems, Inc., USA, will introduce their stunningly comprehensive Bar Code Verification Station, the INTEGRA® 9500, to the European market.

This hightech, camera based barcode verifier is the only one on the market that has been officially certified by the EAN/UCC Authorities as 100% compliant for all EAN/UCC System users. Additionally this PC-based verifier is in full compliance with the data storage regulations for the pharmaceutical industry, as defined in **21.CFR.Part 11**.

The INTEGRA®9500 is the only **all-in-one barcode verifier** for linear AND 2-D codes, with analytical software that is extremely easy to operate. Just placing the label with the code on the viewing platform is enough to have the code automatically discriminated and fully ISO-graded. The unit even shows clearly if and in which area of the code it has found irregularities, to help the operator/printer to adjust his equipment.

Multi combinations of different symbologies, both linear as 2-D, can be verified at one time. Especially interesting for the pharmaceutical, aerospace and automotive industry, but also for any selfrespecting printing and packaging company that wants to take its responsibility for correctly printed barcodes and 2-D codes, which should help to improve the business process, rather than slowing it down!

All features in the INTEGRA®9500 can also be supplied as an on-line system.  
Don't miss us; Your company could fail to stay ahead of competition !  
You will find us in **Hall 11, Standnumber SL9** ("smart label pavillion")
