FOR IMMEDIATE RELEASE

OAK PRINTING SELECTS RADIUS SOLUTIONS PECAS VISION FOR AGGRESSIVE ERP IMPLEMENTATION

Chicago, IL – (August 4, 2005) The Oak Printing Company, a nationally recognized leader in label production and inventory management has decided to implement Radius Solutions ERP application at their Cleveland, OH location.

The aggressive implementation schedule includes a “go-live” date of January 1, 2006, which will coincide with their fiscal year. Another reason to expedite the “go-live”, is that Oak will be able to serve their customers better - as part of their implementation will include adding Scheduling, Estimating and EDI functionality to their ERP solution.

President Jim Helms says, “The Oak Printing Company has utilized three industry specific printing information systems over the years – all of which have presented our company with many challenges and benefits.” Helms added, “As we have worked with Radius Solutions’ excellent staff during our implementation, I have become increasingly confident in their product and I am certain any challenges we face will be minimal.”

Having been exposed to PECAS Vision at a previous employer, Oak Printing Controller J.R. Rogers knew Radius Solutions PECAS Vision would fit the Company’s business requirements.

Rogers says, “Overall, I think the PECAS Vision application is very intuitive and will meet the needs of Oak Printing. I was also impressed with the people in the Radius Solutions organization.”

Radius Solutions President David Taylor commented, “J.R. contacted us about three months ago. He knew our system and what it could do, and he also knew that Oak Printing could benefit from our product capabilities and proven implementation methodology.”

Rogers added, “And, even though our selection process only took a short time, we still did our due diligence (homework), and we are confident in our selection.”
