

Hallstar Acquires Two Dow Hyperplast Additive Lines

Specialty chemicals supplier The HallStar Company (Chicago, IL) has acquired the Dioplex polymeric plasticizers and the Rezilube additives product lines from Dow Hyperlast, a business unit of The Dow Chemical Co.

Dioplex plasticizers are high molecular weight, long-chain polyesters used in applications including food wrap, self-adhesive and electrical tape, and industrial hoses and tubing, while the Rezilube range sees use outside the plastics industry by formulators of biodegradable lubricant base stocks.

The acquired products will be integrated into HallStar's existing infrastructure for sales, customer service, and manufacturing.
