

Ladies and gentlemen:

We would like to thank you for your inquiry regarding sustainability and CO₂ carbon footprint. It is our pleasure to illustrate you our company activities with regard to this topic.

Sustainable economizing and the closely connected sustainable development are part of the NORDENIA Group strategy. Our corporate shared value "GLOBAL" explicitly refers to dealing with our environment responsibly.

For years, NORDENIA has supported the conscientious and sustainable use of the available raw materials. NORDENIA contributes to minimizing the risks and dangers to sustainability in our social relationships, the environment, and economics by way of new developments.

In many product areas, NORDENIA has shown numerous advances. The use of materials has been considerably reduced in many segments while the highest quality requirements have been met exceptionally. In addition, we place very high value on optimized packaging sizes. Within the course of the latest technological developments, NORDENIA is increasingly relying on the use of post-consumer raw materials and the integration of renewable raw materials.

Energy released in the production process is increasingly recovered in our factories, transformed, and reintroduced to the energy household. The variety of measures for the careful handling of resources, the reduction of the company's use of energy, the reduction in the amount of waste produced and a decrease in emissions have already been reflected in the continuous integrated management system improvement process for years.

NORDENIA takes part in the development and implementation of ongoing sustainability projects and topics at the internal, local, and international level.

We deal with the topic of carbon footprint in cooperation with several packaging manufacturers within the framework of the German Association for Plastic Packagings and Films (IK Industrievereinigung Kunststoffverpackungen e.V.). On the part of science, numerous methods for determining greenhouse gas emissions have already been developed. These methods, however, differ strongly in how they take the different pollutants into consideration. The overall pollution value is thus not comparable or revealing. The objective of the working group is to determine the status quo, to exchange experiences with the topic up to now, and to develop a uniform position for our industrial sector.

As a member of the Flexible Packaging Association (FPA), NORDENIA is active in Wal-Mart's Sustainable Packaging Network, with which it supports customers in maintaining the scorecard database.

Among other things, we use the "Sustainability Reporting" working group of the German Association for Sustainable Environmental Management Professionals (Verband für nachhaltiges Umweltmanagement (VNU)) as a platform for the transfer of knowledge in regard to opportunities and risks resulting from sustainability reporting for companies.

Our internal working group "Sustainability", which is composed of members from the departments R&D, Marketing, Environment, and Communication, deals with the ecological effects of the NORDENIA Group actions. In the process, all NORDENIA managers are regularly informed about the current status of the topic of sustainability.

If you have any questions regarding this topic, the internal working group is available to you as a contact partner. Please contact Cord Witkowski, Corporate Communication Manager (cord.witkowski@nordenia.com).

Sincerely,
The Executive Board

Ralph Landwehr
Chairman of the Executive Board

Andreas Picolin
Vice Chairman of the Executive Board

Andreas Busacker
Member of the Executive Board
