Wikoff Color Corporation Introduces Versatile Water-Based Flexo Series

Wikoff proudly introduces HydroSpense, a highly adaptable dispenser base mixing series for the water-based Flexo market. HydroSpense is well suited for a variety of substrates including paperboard, labels, non-absorbent films and matte stocks; making it a great fit for a broad array of end-use applications. Designed with versatility in mind, HydroSpense is compatible with a wide range of dispenser sizes and pump systems. A low viscosity range and excellent pH stability help HydroSpense to be a top performer on press.

Exceptional color reproducibility can be achieved with the high strength properties of the 17 available pre-letdown dispenser bases.

The HydroSpense mixing series offers three levels of lightfast performance – lightfast (LF, 48-150 hours), very lightfast (VLF, 150-300 hours), and extreme lightfast (XLF, 300+ hours) – depending on color.

HydroSpense can be paired with multiple Wikoff extenders to impart the desired end-use properties of each customer. Contact your local Wikoff representative to choose the appropriate extender for your specific needs.
