New Montalvo Technical Article – Learn How to Test and Troubleshoot Your Load Cells

May 13, 2022, Gorham, ME, USA – Montalvo, an international specialist in Web Tension Control and Web Handling, is proud to publish an in-depth article educating users on how to troubleshoot and test Load Cells. Load Cells play an integral role in measuring the Web Tension throughout the process, and as such, they must be accurate and function properly at all times. Furthermore, they are required to perform in every environment, which, at times, can present numerous challenges to their functionality, and thus knowing how to troubleshoot Loads Cells could shorten machine downtime. In this brief article, Montalvo explains why Load Cells fail and provides four ways to troubleshoot, diagnose and solve any missed performance features.

Doug Brockelbank, Director of Technical Sales and Service, says, "Providing high-quality products is one thing; but providing technical support 5, 10, and even 20 years after the products were installed is entirely different. Montalvo's technical support and services are one of our known key differentiators in the market, and we pride ourselves on it. Our Load Cells are designed to work in the roughest environments without any difficulties. But as rare as it is, Load Cells can start to miss perform, and in this case, our customers know that Montalvo is here for

them. The goal of our internal sales support and technical services team is to provide our customers with the support they require, whether that be videos, technical articles, or in-person or over-the-phone support.
